1. Program/Accelerator overview and results framework

This section provides an overview of the Program/Accelerator, outlining its intervention logic and the results framework. It also demonstrates the alignment of the Program/Accelerator results framework with the CGIAR Performance and Results Management Framework (PRMF) and Portfolio outcomes, ensuring system thinking.

Program/Accelerator overview

Description

The [CGIAR Food Frontiers and Security Science Program](#) (henceforth Frontiers Program) represents an exciting new direction for the CGIAR Portfolio. The Program is co-designed and builds on three frontier food systems:

1. [Fragile and conflict-affected food systems](#) (FCAS)
2. [Urban and peri-urban food systems](#)
3. [Island food systems](#)

These systems, while distinct, share heightened vulnerability to climate, conflict, and resource shocks, and represent high-leverage entry points for innovation and resilience-building. They are emblematic of the Anthropocene, where intersecting risks challenge traditional development approaches but also unlock opportunities for systems transformation. These are brought together in the **Future Food Systems Lab** as a global hub for synthesis, foresight, and innovation brokerage in frontier systems, connecting local experimentation with global policy relevance.

During the 2025-30 CGIAR Portfolio Inception Phase (January-June 2025), the Frontiers Program analyzed its [comparative advantage](#) and found that CGIAR holds a uniquely influential position in frontier geographies due to its embedded partnerships, innovation science capacity, and systems research heritage (see Section 4). This position allows CGIAR to convene key stakeholders, bridge policy and evidence gaps, and co-develop solutions to complex challenges in fragile and under-served contexts. This analysis has clarified CGIAR's added value and shaped the strategic focus of the Program.

The Program focuses most heavily on Eastern and Southern Africa, South Asia, and Southeast Asia (including the Pacific), identifying (using a [knowledge-driven prioritization](#) exercise) these as regions where frontier system challenges are acute and where CGIAR can deliver high-impact, integrated interventions.

The Frontier Program's [Theory of Change](#) has been significantly refined to align with a systemic approach to impact—one that is co-created, non-linear, and rooted in institutional change, anticipatory action, and inclusive governance (see Section 3). Its [Monitoring, Evaluation, Learning, and Impact Assessment \(MELIA\)](#) framework supports adaptive management and accountability (see Section 3.2).

The Program has demonstrated an ability to manage uncertain funding landscapes, prioritizing flexibility, integration with bilateral efforts, and co-financing models with partners (see [Section 9](#)). Strategic budgeting and contingency planning have been incorporated to safeguard delivery in

fragile and dynamic settings as is outlined in the [Plan of Results and Budget \(PORB\)](#) (see Section 7).

Key partnerships across the portfolio, including with the [Scaling for Impact](#) Accelerator and the [Policy Innovations Science Program](#), ensure that the Frontiers Program is not siloed, but instead contributes to and benefits from system-wide collaboration on scaling, policy influence, and innovation delivery. Cross-Portfolio and regional coordination mechanisms through CGIAR structures further enhance coherence, efficiency, and impact.

The Frontiers Program enters the implementation phase with a bold, clear, and adaptive strategy to generate actionable research and drive inclusive transformation—positioning CGIAR to contribute meaningfully to global efforts to address the intersecting crises of climate change, fragility, and food insecurity. In an era defined by the Anthropocene, the Program offers a timely and essential response to build resilience and equity in systems most at risk and overlooked by mainstream innovation pathways.

Components

AoW1: Future Food Systems Lab

Conflict-affected areas, urban/peri-urban regions, and islands face shared challenges like limited resources, social inequalities, isolation, and climate vulnerability. This AoW will foster innovation, research, and foresight analysis to tackle the complex, intersecting challenges faced by these fragile food systems. The lab will collaborate with local partners to create an innovation ecosystem that accelerates the adoption and scaling of solutions tailored to frontier systems.

AoW2: Fragile and Conflict-affected Food Systems

By 2030, 2/3 of the world's extremely poor will reside in fragile and conflict-affected (FCA) countries, where rising and protracted conflicts exacerbate hunger and malnutrition and threaten the livelihoods of 1.5 billion people through violence, poor governance, climate change, and limited resources. This area of work will analyze what policies, programming, interventions, and innovations can better anticipate and prevent; respond to; and support recovery from shocks and crises, providing guidance to policymakers and stakeholders in FCA countries.

AoW3: Urban Food Systems

By 2050, most of the world will live in cities where food insecurity is growing. Investing in safe, nutritious, and accessible urban food markets—alongside sustainable urban agriculture and circular bio-economies—can improve food security, jobs, and resilience. As a result, AoW3 aims to help governments and partners strengthen urban food systems. This includes improving waste conversion, enhancing food safety, and supporting youth employment in sustainable food systems, to improve access to safe, nutritious, and affordable food, especially in low-income areas.

AoW4: Island Food Systems

Reducing reliance on imported food through climate-smart agriculture, improved fisheries, effective programming, and regional cooperation will strengthen island food system resilience. This AoW thus aims to foster healthy and sustainable food system transitions through evidence-based strategies, co-designed innovations, and strengthened networks, ultimately aiming for improved diets, reduced non-communicable diseases, and a sustainable blue economy. This

AoW's research represents the only deliberate focus on the Pacific region within CGIAR's 2030 Portfolio, despite the area covering 30% of the planet.

Theory of change

Narrative

The Frontiers program's Theory of Change (ToC) articulates a clear and actionable framework, directly linking program activities (outputs) to anticipated changes (outcomes) and ultimately, to the desired overarching goal of enhanced resilience in frontier food systems (impact).

The program's initial outputs include developing and disseminating tools, innovations, and actionable scientific evidence to guide policies, programming, interventions, and resilience-building plans of policymakers and other key stakeholders in frontier food systems. This leads directly to the outcome of these actors being better prepared to anticipate emerging risks—across climate, health, and conflict—and make more strategic decisions that foster long-term sustainability within frontier food systems. Simultaneously, the program produces outputs such as tailored training, decision-support tools, and business model development for Small and Medium Enterprises (SMEs), local innovators, and community-based organizations. The direct outcome of these interventions is the empowerment of these local actors to effectively scale context-specific innovative solutions, which in turn contributes to the impact of improved livelihoods, health, and ecosystems at the grassroots level. Furthermore, the program generates the output of leading-edge evidence and scenario-based guidance specifically for policymakers. This crucial information enables the outcome of policymakers crafting more adaptive and inclusive policies that are specifically responsive to the unique vulnerabilities inherent in frontier systems, thereby establishing a more supportive policy environment for resilient food systems. Critically, the program's outputs also includes investing in capacity sharing initiatives, which extend beyond mere technical exercises to become a pathway for shifting power and fostering genuine local leadership. The resulting outcome is a strengthened local agency and ownership over resilience-building efforts, ensuring that innovations are both locally driven and sustainable.

2. Monitoring plan for HLOs and outcomes

The program has a comprehensive monitoring strategy and tool which is currently under development, and we are awaiting feedback from the team. Once finalized, center focal points

will be responsible to ensure deliverables, including knowledge products, capacity development, and innovation development results, are logged, inclusive of all supporting evidence. Tailored to the specific requirements of each Area of Work (AoW) and adaptable by individual CGIAR Centers, this tool will be completed directly by them and saved in shared folders, enabling robust program-level progress tracking. For outcomes, we will employ a multi-faceted approach. This involves using surveys and interviews to gauge the influence on funder investments. Innovation scaling will be monitored via midline surveys, detailed logs on adoption and reach, qualitative case studies, and CGIAR scaling readiness tests. Policy influence will be tracked through mentions in government documents, social media, news, and policymaker interviews. Finally, impacts on food system actors and livelihoods will be assessed through midline and endline surveys, adoption tracking, and qualitative data from focus groups and success stories. Data collection will be done at regular, pre-determined frequencies tailored to each indicator's nature and reporting requirements.

3. Evaluation plan

Evaluation studies

MELIA studies template in Annex 2.

Evaluation collaboration plans

Narrative

The Frontiers Program will conduct collaborative evaluations with CGIAR's Policy Innovations SP, Gender Accelerator, Scaling for Impact Accelerator, Better Diets and Nutrition SP, and Multifunctional Landscapes SP. Additionally, MELIA studies will be supported in several cases by bilateral grants, such as funding to study the impacts of social protection programming and women's empowerment interventions. This broad collaboration ensures comprehensive and relevant impact assessment, fostering shared learning and driving systemic change across diverse food systems.

4. Impact assessment

Program/Accelerator impact overview

Narrative

The Frontiers program's Areas of Work (AoWs) collectively bolster resilience in frontier food systems by targeting several key outcomes, ultimately leading to significant impacts. They ensure CGIAR partners and funders use evidence to inform investments by providing critical tools and plans, fostering proactive, data-driven decisions that strengthen sustainability across food, land, and water systems. Simultaneously, the AoWs empower diverse stakeholders, including humanitarian – development – peace (HDP) actors, government actors, civil society organizations, and entrepreneurs, to implement programming and other solutions, and scale innovations. Through tailored training and decision-support tools, the program enables these actors to drive context-specific resilience-building efforts at both global and local levels. Additionally, policymakers with new tools and guidance will create targeted policies and

programming that specifically strengthen frontier food, land, and water systems. Finally, a core contribution of the AoWs is to ensure food system actors adopt new tools, innovations, or evidence that improve livelihoods, health, and environments. This is achieved by investing in capacity sharing that fosters local agency and ownership, leading to tangible improvements in communities. Collectively, these contributions culminate in the overarching impact of enhanced resilience in frontier food systems, alongside improved livelihoods, health, equity, and ecosystems at the grassroots level. By weaving together evidence-based investment, empowered local action, supportive policy, and widespread adoption of innovation, the AoWs create a robust and interconnected framework for a more resilient and equitable future in frontier regions.

The Frontiers program's impact directly supports CGIAR's portfolio-level goals. By enhancing resilience in frontier food systems, the program contributes to ending hunger and enabling affordable, healthy diets for vulnerable populations. Empowering local actors and improving livelihoods directly helps lift people out of extreme poverty and reduces poverty in all its dimensions. Focusing on vulnerable groups, including women, supports women's empowerment and gender equality more broadly. Furthermore, by fostering climate adaptation solutions and promoting sustainable practices, Frontiers aids in equipping small-scale producers to be more resilient to climate shocks and supports global efforts to implement National Adaptation Plans. The program's focus on improved health and ecosystems aligns with reducing foodborne and zoonotic diseases and maintaining planetary boundaries, collectively advancing CGIAR's ambitious global impact targets.

Assumptions in the updated ToC

The program's success hinges on key assumptions. We assume diverse actors, from policymakers to local innovators, will willingly apply our evidence and tools. If not, our policy guidance (output) will not lead to adaptive policies (outcome), and local training (output) will not scale solutions, hindering livelihoods. Crucially, we also assume conducive contexts for uptake. Instability could impede tool utilization, while resistant power structures might prevent capacity sharing (output) from truly empowering local agency (outcome). We will actively monitor these assumptions to adapt our strategies and ensure the program achieves its intended impacts on food, land, and water systems.

IA activities and collaboration plans

Narrative

The Frontiers Program's overall approach to Impact Assessment strategically complements its routine MEL activities by focusing on causal impact assessments of selected novel interventions where evidence is currently lacking and key decision-makers stand ready to adapt or expand program based on study conclusions. The rationale behind this choice is multi-faceted: it aims to generate new, robust evidence for interventions without established efficacy, rigorously test critical Theory of Change (ToC) assumptions regarding the causal links between activities and outcomes, and ultimately inform future programming by identifying what works as well as why and when. It can also highlight where knowledge gaps still persist. These assessments also provide a crucial feedback mechanism, allowing the program to reassess ToC assumptions and risks and adjust approaches and methodologies as needed, fostering adaptive management. Critically, these studies are designed with their scaling potential in mind, ensuring the generated

evidence is relevant for wider adoption and systemic change. While the exact number of studies is not specified, the focus on “selected interventions” implies a targeted approach to effectively deploy robust methods for evaluating short- and medium-term impacts contributing to the five CGIAR Impact Areas, prioritizing those with the greatest potential for learning and scaling.

Collaboration with other Programs/Accelerators, W3/bilateral projects, and/or partners to deliver the impact assessment work.

While specific details regarding the Frontiers Program’s collaborative impact assessment work are still being formalized, its approach aligns with a broader CGIAR emphasis on synergistic efforts. The program is committed to working with other Programs (Policy Innovations and Scaling for Impact SPs), Accelerators, W3/bilateral projects, and diverse partners to ensure a robust and impactful assessment process.

IA studies

MELIA Studies template in Annex 2.

5. Learning and adaptive management

Learning

The Frontiers Program’s MELIA studies are not just about collecting data; they are strategically designed to be a dynamic feedback loop that directly informs management decisions and cultivates a culture of continuous internal learning. This means that the insights gathered from every evaluation, and case study are not simply archived; they are channelled back into the program’s operations to refine strategies, adjust interventions, and optimize resource allocation. As some key examples, AoW1’s vendor business model case studies will directly guide partnership strategies and resource allocation. AoW2’s evaluations of anticipatory action, emergency response programming, and recovery programming (e.g., focused on livelihoods and women’s empowerment) will inform how our partners refine intervention designs (e.g., how they are targeted, what support they include, how they are deployed, how long they endure, etc) in fragile settings. AoW3’s urban gardening assessments will provide crucial information to make decisions about scaling urban food security initiatives. And AoW4’s work on aquatic food handling and Indigenous food promotion will shape how the program supports local food systems, while its work on how shocks impact women’s livelihoods will influence partners’ decisions on the best ways to support women. All of these emerging lessons will be integrated into semi-annual management meetings, ensuring adaptive management and continuous program improvement across all funding streams.

Annual review and adaptive planning

The Program/Accelerator will build on the experience of the 2022–24 Portfolio approach to adaptive management.

6. Reporting

The program will ensure quality of data reported into the Program Results Monitoring System (PRMS) by having the respective Area of Work (AoW) leads to clearing them.

7. MELIA resources

MELIA budget and staff

MELIA budget and staff tables in Annex 3.

8. Data management

General approach

At the Program/Accelerator level, we will manage a diverse set of data collected through household, individual, and enterprise surveys; community-level surveys; and qualitative data collection methods, including focus group discussions, key informant interviews, and other participatory techniques.

- **Data Collection:** Data will be collected using a mix of modalities, including in-person and phone-based surveys, as well as pen-and-paper and digital tools (e.g., SurveyCTO, ODK) depending on context and feasibility. We will also incorporate remote sensing and geospatial data (e.g., satellite imagery, GIS layers) to complement field-based data collection and support spatial analysis.
- **Data Management:** All data will be centrally documented and cleaned using standardized protocols. Survey data will be anonymized, and unique identifiers will be used to securely link datasets across levels (e.g., household to individual or enterprise). Qualitative data will be transcribed and digitized, with identifying information removed to ensure confidentiality.
- **Data Use and Storage:** All data will be stored on secure servers or cloud platforms in accordance with the data governance policies of each implementing CGIAR Center. Access will be limited to authorized personnel and governed by internal data sharing agreements. Metadata and codebooks will be developed and maintained to ensure traceability, consistency, and future usability.
- **Governance and Principles:** All teams will adhere to their respective CGIAR Center's data governance and protection policies. To the extent possible, data will be managed in line with FAIR principles (Findable, Accessible, Interoperable, Reusable), ensuring both the security of sensitive information and the long-term value of the datasets for research and policy engagement

Testing group therapy and cash transfers for the extreme poor in a fragile setting	A team of researchers from IFPRI (Melissa Hidrobo, Harold Alderman, Jessica Leight, Heleene Tabet, and Daniel Gilligan), World Vision (Michael Mulford), University of Illinois (Parthu Kalva), and Addis Ababa University (Negussie Deyessa) have conducted a randomized controlled trial in partnership with World Vision evaluating the effects of a psychotherapy program (Group Problem Management Plus) with and without a one-time lump sum cash transfer on measures of both economic and psychological well-being outcomes. The study takes place in the region of Amhara and Oromia during a period of active armed conflict. Individuals in the study are clients of the Productive Safety Net Program (PSNP) reporting some depressive symptoms or functional impairment at baseline. The evaluation design is a cluster randomized controlled trial with a baseline survey that was administered in July 2022 (before the psychotherapy sessions were rolled out), an endline survey administered in September/October 2022 (after psychotherapy sessions were completed), and a post-endline administered October 2023-January 2024 (after the cash transfers were distributed). The studies primary outcomes are those related to mental health (depression, stress, anxiety, functionality), economic standing (household consumption, savings, value of assets, food security), and childcare. In addition, to the primary outcomes of interest, we are interested in potential pathways through which the gPM+ and cash could improve mental health and economic outcomes and how armed conflict moderates these impacts.	<i>Causal impact assessment learning studies</i>	3	214	25,480.92	workshop	4,519.08	30,000.00

Evaluation of the Group Problem Management Plus (Group PM+) pilot study in Tigray, Ethiopia	A team of researchers from IFPRI (Melissa Hidrobo, Jessica Leight, Sarim Zafar, and Daniel Gilligan), the World Bank (Adiam Hagos Hailemicheal), World Vision (Michael Mulford), and Addis Ababa University (Negussie Deyessa) is currently conducting a randomized controlled trial in partnership with World Vision to evaluate the impact of a psychotherapy intervention, group problem management plus (gPM+), on reducing common mental health problems in Tigray. The proposed study will test the effectiveness of two different implementation models for delivering gPM+. The first is through supporting health extension workers (HEWs) who are public employees already in place under government supervision. The second is through recruiting local facilitators (LF) that are engaged on an hourly basis and supervised by World Vision mental health staff. Individuals in the study are clients of the Productive Safety Net Program (PSNP) from Tigray in a post-conflict setting. The evaluation design is a cluster randomized controlled trial with a baseline survey that was administered in March- April 2024 (before the psychotherapy sessions are rolled out), an endline survey that was administered in July-August 2024 (after the psychotherapy sessions was completed), and a post-endline planned for July-August 2025. The studies primary outcomes are those related to mental health (depression, stress, anxiety, functionality) and child development. Secondary outcomes include economic activity, social support, socioemotional skills, and coping mechanisms. We will also collect data on gender-based violence and conflict in the area.	<i>Causal impact assessment learning studies</i>	4	535	73,160.40	workshop	18,824.60	91,985.00

Evaluation of the impact of the Economic Inclusion Program (EIP) in Kenya	In partnership with the World Food Program and the Government of Kenya, this project evaluates the impact of the Economic Inclusion Program (EIP) in Kenya. The EIP is a poverty graduation program run by the Kenyan government, which is tailored to address the needs of the extreme poor in Kenya. It aims to enhance access to social and economic services by increasing poor households' access to skills, productive inputs, assets, finance, and economic opportunities. Specifically, the EIP includes: (i) consumption support of 2,000 KES per household per month for 8 months, (ii) an asset grant of 30,000 KES per household, (iii) skills training and mentoring, and (iv) creation of village savings and loan associations. We plan to evaluate the second phase of the EIP program which ran from May to December 2024 across five counties—Kisumu, Marsabit, Makueni, Murang'a, and Taita Taveta. Using a cluster randomized design, we aim to evaluate the impact of the EIP program on economic outcomes (e.g., consumption, income, savings, and assets) as well as other welfare (e.g., food security, diets, intimate partner violence) and psychosocial outcomes (such as self-efficacy, aspirations, mental health, and social cohesion). For this purpose, we conducted a baseline household survey in April– June 2024, and plan to conduct an endline survey approximately one year after the baseline survey. Additionally, we will administer a non-agriculture enterprise census and market survey in study villages to capture enterprise and market-level impacts, including revenues and profits.	<i>Causal impact assessment learning studies</i>	4	503.5	48,451.87	Survey, transport, workshops	151,548.13	200,000.00

Ultra-Poor IDPs and Vulnerable Host Communities in Baidoa								
Evaluating a Reduced Graduation Model to Improve Child Nutrition and Household Livelihoods in Rural Ethiopia	IMPEL - We conduct a cluster randomized controlled trial evaluating a reduced graduation model intervention addressing the high rates of chronic undernutrition among young children in the poorest households (beneficiaries of the Productive Safety Net Program) in rural Ethiopia. We hypothesize that a set of limited livelihood interventions coupled with behavioral change communication delivered via nurturing care groups and maternal cash grants will improve child nutritional status through improved child feeding practices, reduced growth faltering, and enhanced household livelihoods. We use a cohort-focused sampling strategy (sampling pregnant women and infants at baseline) in conjunction with carefully timed surveys (a midline survey 12 months post-baseline and endline 36 months post-baseline) to capture the complex age dynamics of child feeding and linear growth faltering. Primary outcome variables include caregiver nutrition knowledge, child's dietary diversity and height-for-age. Secondary outcomes include other child feeding and anthropometric indicators and household livelihood outcomes.	<i>Causal impact assessment learning studies</i>	2	207.625	30,956.49	Survey, transport, workshops	129,043.51	160,000.00

Farmers in Yemen								
Can Trainings on Women's Voice and Agency Raise Women's Aspirations, Entrepreneurial Activities, and Well-being? A Causal Impact Assessment From Rural Nigeria	With ActionAid Nigeria, we co-designed a six-month training program for women and men in regions grappling with farmer-herder conflict, which is now a CGIAR innovation. The program built women's advocacy skills and engaged men to support women's community involvement, with skilled facilitators delivering structured, manual-guided sessions to 13 couples in each of 450 rural wards across Southwest Nigeria. Using a rigorous randomized control trial, the partnership generated causal evidence of the program's positive impacts on women's social capital, livelihood opportunities, and economic participation. Inspired by these findings, ActionAid is scaling the curriculum to new areas and integrating lessons into its broader women's empowerment programming. In 2025, we plan to extend the learnings from this project from policy briefs into academic papers, actively fundraise for a second endline to understand the long-term effects of the intervention, disseminate the CGIAR innovation to new partners, and collaborate with ActionAid around their demands for a new RCT studying the impacts of the GALS curriculum (which focuses more on intra-household decision-making and livelihoods) within conflict-affected states in Nigeria (northern Nigeria and SE).	<i>Causal impact assessment learning studies</i>	2	343.75	62,921.00	Survey, transport, workshops	97,079.00	160,000.00

Sustainable Land Management (SLM) practices as a climate risk adaptation strategy in Ethiopia: Endline dataset								
Gendered Labor Impacts of Herder-Related Violence in Nigeria	In partnership with colleagues at the World Bank, generate evidence on how agricultural households cope with exposure to herder-related violence in Nigiera. The results indicate unique intra-household inequalities in shifts in labor in response to herder-related violence.	<i>Causal impact assessment learning studies</i>	1	68.75	13,100.00	N/A	-	13,100.00
Analyzing the Impact of Conflict on Community Health Worker Effectiveness and Household Outcomes in Rural Mali	Community Health Workers (CHWs) in Conflict Settings: I am partnering with Muso, a global health NGO started in Mali that aims to reduce child and maternal mortality through home-visiting community health workers (CHWs), to conduct additional analysis on already-existing and under-utilized data from a recently published RCT trial. The published study found that home visits versus fixed-site care by CHWs in rural Mali had similar effects on child survival; however, the trial was interrupted by several conflict events in the study region, which was not incorporated into their analysis. Thus, I plan to link their trial data with a conflict-event data to generate insights on how CHW productivity and household livelihoods are be affected by conflict in the Sahel.	<i>Causal impact assessment learning studies</i>	1	220	34,331.60	N/A	-	34,331.60

Evaluating Large-Scale Nutrition Programs in the Sahel Region	The Mormon Church is planning \$1B in investments in nutrition programming in fragile and conflict-affected areas over the next 5-10 years. To inform their programming, in 2025 they are planning a coordinated set of evaluations to study the impacts of a bundled nutrition intervention across 5 countries in the Sahel (Chad, Mali, Niger, Nigeria, and Burkina Faso). They are targeting conflict-affected regions within these countries and view this programming as part of a crisis response portfolio. A large component of the programming specifically targets women / mothers of young children. The surveys and intervention costs are fully funded by the Mormon Church. In Nigeria, the study will be randomized with Care as the implementing organization; in other countries, the learning questions and survey instruments will be coordinated, and the design will be quasi-experimental. With support, IFPRI could be involved in the RCT in Nigeria as well as in guiding the coordinated design across the other countries to amplify learning and impact. This project has significant potential to influence the aid portfolio of a new donor that is ramping up investment in the region, as well as to influence Care programming. This work would be getting started in mid-2025, with an endline coming in early 2026.	<i>Causal impact assessment learning studies</i>	1	165	19,167.55	workshop	7,027.89	26,195.45
Impact Evaluation of Digital Cash Transfers in Conflict-Affected Sudan	This is an on-going impact evaluation of digital transfer in Sudan. It tests whether digital cash can serve those under active conflict. Baseline data have been collected and endline data are being collected through funding from FCM and the Sudan SSP.	<i>Causal impact assessment learning studies</i>	2	275	36,915.18	workshop	18,083.97	54,999.15

Evaluating Cash, In-Kind, and Digital Transfers in Conflict-Affected Settings in Partnership with WFP	This is an on-going impact evaluation of the relative effectiveness of different modalities of transfer (cash, in-kind and digital) in conflict-affected setting. This is being implemented with WFP. This was funded under WP2 of FCM	<i>Causal impact assessment learning studies</i>	2	137.5	18,457.56	Survey, transport, workshops	121,542.44	140,000.00
Rebuilding Trust in Local Governance Through Targeted Interventions in Conflict-Affected Ethiopia	This project builds on an RCT launched in 2023 to study how alternative targeting of cash transfers can help cushion the adverse impacts of conflict and rebuild trust in local governance in conflict affected setting in Ethiopia.	<i>Causal impact assessment learning studies</i>	3	687.5	109,683.01	Survey, transport, workshops	90,316.99	200,000.00
Evaluating Migration Prediction Tools Using Household Surveys in Honduras	Confirming the predictive capacity of the e-MPI and i-MPI for external and internal migration in Honduras and defining next steps for the tool: During May-June 2025, we will conduct the 2nd follow up survey to a panel sample of 1,200 households across 9 departments in Honduras. These data will allow us to assess how well the e-MPI and i-MPI (captured at baseline) predicted these migration instances, both standalone and against other potential measures. The results will be included in a paper and submitted to a journal for publication.	<i>Causal impact assessment learning studies</i>	3	100.5	15,470.00	Survey, transport, workshops	14,530.00	30,000.00

Assessing Long-Term Impacts of Cyclone Idai in Mozambique	Impact of Cyclone Idai on Mozambique: We study exposure to Cyclone Idai in Mozambique in 2019, the most destructive cyclone ever recorded in Africa, on households previously enrolled in an RCT using post-cyclone surveying of households in 2019 and four years later. We will generate evidence on whether temporary negative shocks can have persistent impacts on poverty if they cause households to fall into a poverty trap, due to (for example) loss of employment, livestock, or other productive assets; or through health channels, such as acquisition of persistent, incurable conditions such as HIV.	<i>Causal impact assessment learning studies</i>	1	206.25	32,185.87	N/A	-	32,185.87

The Impact of Brick Kilns on Fragile Food Systems and Migrant Workers in Bangladesh	Food security in fragile settings like Bangladesh is threatened by environmental degradation, labor exploitation, and climate change. Agricultural productivity is vital, yet traditional brick kilns accelerate land degradation by emitting black carbon and extracting topsoil, reducing yields. With climate change shrinking arable land, sustaining food systems is critical to prevent increased displacement and migration. We propose a natural experiment using FAO and NASA satellite imagery to assess how brick kilns impact agricultural productivity. Machine learning techniques will compare crop yields near and far from kilns, informing policies to mitigate soil degradation. The Ministry of Agriculture has expressed interest in evidence-based solutions. Brick kilns rely on migrant labor, often under exploitative conditions. A recent study (Miller et al., 2024) found: 50% of workers were trafficked into bonded labor. 70% of kilns employed child labor. We propose a policy brief using newly collected data to inform the Ministry of Women and Children Affairs on addressing forced labor and migrant worker protections. This study will help policymakers and development agencies strengthen agricultural resilience and labor protections, addressing the interlinked crises of food security, land degradation, and migration.	<i>Ex-ante, baseline and/or foresight study</i>	2	302.5	31,128.07	workshop	6,490.00	37,618.07

MELIA Budget: Total Cost

Activity title	Activity description	2025
		(Budget)
AoW2		
2. MELIA studies: Cross-cutting		
MELIA studies to evidence the achievement of program-level impacts and outcomes		
Assessing knowledge uptake and beneficiary reach under AoW2 through a qualitative evaluation	This activity possibly to be a FFS-wide study that will build on prior qualitative interviews and processes set up under the initiatives	0
Sub-total: Cross-cutting MELIA costs		0
3. MELIA studies: AoW outcomes		
MELIA studies to evidence the achievement of AoW-level intermediate outcomes not covered by any cross-cutting MELIA studies		
Testing group therapy and cash transfers for the extreme poor in a fragile setting	A team of researchers from IFPRI (Melissa Hidrobo, Harold Alderman, Jessica Leight, Heleene Tambet, and Daniel Gilligan), World Vision (Michael Mulford), University of Illinois (Parthu Kalva), and Addis Ababa University (Negussie Deyessa) have conducted a randomized controlled trial in partnership with World Vision evaluating the effects of a psychotherapy program (Group Problem Management Plus) with and without a one-time lump sum cash transfer on measures of both economic and psychological well-being outcomes. The study takes place in the region of Amhara and Oromia during a period of active armed conflict. Individuals in the study are clients of the Productive Safety Net Program (PSNP) reporting some depressive symptoms or functional impairment at baseline. The evaluation design is a cluster randomized controlled trial with a baseline survey that was administered in July 2022 (before the psychotherapy sessions were rolled out), an endline survey administered in September/October 2022 (after psychotherapy sessions were completed), and a post-endline administered October 2023-January 2024 (after the cash transfers were	30,000

	distributed). The studies primary outcomes are those related to mental health (depression, stress, anxiety, functionality), economic standing (household consumption, savings, value of assets, food security), and childcare. In addition, to the primary outcomes of interest, we are interested in potential pathways through which the gPM+ and cash could improve mental health and economic outcomes and how armed conflict moderates these impacts.	
Evaluation of the Group Problem Management Plus (Group PM+) pilot study in Tigray, Ethiopia	A team of researchers from IFPRI (Melissa Hidrobo, Jessica Leight, Sarim Zafar, and Daniel Gilligan), the World Bank (Adiam Hagos Hailemicheal), World Vision (Michael Mulford), and Addis Ababa University (Negussie Deyessa) is currently conducting a randomized controlled trial in partnership with World Vision to evaluate the impact of a psychotherapy intervention, group problem management plus (gPM+), on reducing common mental health problems in Tigray. The proposed study will test the effectiveness of two different implementation models for delivering gPM+. The first is through supporting health extension workers (HEWs) who are public employees already in place under government supervision. The second is through recruiting local facilitators (LF) that are engaged on an hourly basis and supervised by World Vision mental health staff. Individuals in the study are clients of the Productive Safety Net Program (PSNP) from Tigray in a post-conflict setting. The evaluation design is a cluster randomized controlled trial with a baseline survey that was administered in March- April 2024 (before the psychotherapy sessions are rolled out), an endline survey that was administered in July-August 2024 (after the psychotherapy sessions was completed), and a post-endline planned for July-August 2025. The studies primary outcomes are those related to mental health (depression, stress, anxiety, functionality) and child development. Secondary outcomes include economic activity, social support, socioemotional skills, and coping	91,985

	mechanisms. We will also collect data on gender-based violence and conflict in the area.	
Evaluation of the impact of the Economic Inclusion Program (EIP) in Kenya	In partnership with the World Food Program and the Government of Kenya, this project evaluates the impact of the Economic Inclusion Program (EIP) in Kenya. The EIP is a poverty graduation program run by the Kenyan government, which is tailored to address the needs of the extreme poor in Kenya. It aims to enhance access to social and economic services by increasing poor households' access to skills, productive inputs, assets, finance, and economic opportunities. Specifically, the EIP includes: (i) consumption support of 2,000 KES per household per month for 8 months, (ii) an asset grant of 30,000 KES per household, (iii) skills training and mentoring, and (iv) creation of village savings and loan associations. We plan to evaluate the second phase of the EIP program which ran from May to December 2024 across five counties—Kisumu, Marsabit, Makueni, Murang'a, and Taita Taveta. Using a cluster randomized design, we aim to evaluate the impact of the EIP program on economic outcomes (e.g., consumption, income, savings, and assets) as well as other welfare (e.g., food security, diets, intimate partner violence) and psychosocial outcomes (such as self-efficacy, aspirations, mental health, and social cohesion). For this purpose, we conducted a baseline household survey in April– June 2024, and plan to conduct an endline survey approximately one year after the baseline survey. Additionally, we will administer a non-agriculture enterprise census and market survey in study villages to capture enterprise and market-level impacts, including revenues and profits.	200,000
Building a Pathway Out of Poverty for Ultra-Poor IDPs and Vulnerable Host Communities in Baidoa	Evaluation of a graduation program among IDPs in Baidoa, Somalia	40,000
Evaluating a Reduced Graduation Model to Improve Child Nutrition and Household Livelihoods in Rural Ethiopia	IMPEL - We conduct a cluster randomized controlled trial evaluating a reduced graduation model intervention addressing the high rates of chronic undernutrition among	160,000

	young children in the poorest households (beneficiaries of the Productive Safety Net Program) in rural Ethiopia. We hypothesize that a set of limited livelihood interventions coupled with behavioral change communication delivered via nurturing care groups and maternal cash grants will improve child nutritional status through improved child feeding practices, reduced growth faltering, and enhanced household livelihoods. We use a cohort-focused sampling strategy (sampling pregnant women and infants at baseline) in conjunction with carefully timed surveys (a midline survey 12 months post-baseline and endline 36 months post-baseline) to capture the complex age dynamics of child feeding and linear growth faltering. Primary outcome variables include caregiver nutrition knowledge, child's dietary diversity and height-for-age. Secondary outcomes include other child feeding and anthropometric indicators and household livelihood outcomes.	
Impact assessment of Ethiopia's Productive Safety Nets Program, impacts on conflict and social cohesion	Impact assessment of Ethiopia's Productive Safety Nets Program, impacts on conflict and social cohesion	30,000
Evaluation of Vouchers for Biofortified Seed Bundles	Evaluation of bio-fortified seed bundles in among communities with IDPs in Northern Nigeria: This study evaluates the impact of a bundle of bio-fortified seeds and other inputs among communities (with IDPs) in Northern Nigeria (Gombe state). Bundles were either not offered, offered at full price, 50% subsidy, or 75% subsidy.	240,000
Evaluating the Economy-Wide Impacts of Cash Transfers With and Without Complementary Interventions in Yemen	Impact evaluation comparing cash alone to cash combined with other development interventions in the same village. Focused on measuring village economy-wide impacts.	26,667
Assessing the Impact of Public Works Alone Versus Bundled Interventions on Women's Empowerment in Yemen	Impact evaluation comparing public works program alone to equivalent cost combination of public works plus training and asset distribution to encourage productive use of income. Focused on women and outcomes include female empowerment and control of decision-making.	26,667
Evaluating the Impact of Subsidized Solar Irrigation on Smallholder Farmers in Yemen	Impact evaluation of subsidized solar irrigation infrastructure for smallholder farmers in Yemen	26,667

Can Trainings on Women's Voice and Agency Raise Women's Aspirations, Entrepreneurial Activities, and Well-being? A Causal Impact Assessment From Rural Nigeria	With ActionAid Nigeria, we co-designed a six-month training program for women and men in regions grappling with farmer-herder conflict, which is now a CGIAR innovation. The program built women's advocacy skills and engaged men to support women's community involvement, with skilled facilitators delivering structured, manual-guided sessions to 13 couples in each of 450 rural wards across Southwest Nigeria. Using a rigorous randomized control trial, the partnership generated causal evidence of the program's positive impacts on women's social capital, livelihood opportunities, and economic participation. Inspired by these findings, ActionAid is scaling the curriculum to new areas and integrating lessons into its broader women's empowerment programming. In 2025, we plan to extend the learnings from this project from policy briefs into academic papers, actively fundraise for a second endline to understand the long-term effects of the intervention, disseminate the CGIAR innovation to new partners, and collaborate with ActionAid around their demands for a new RCT studying the impacts of the GALS curriculum (which focuses more on intra-household decision-making and livelihoods) within conflict-affected states in Nigeria (northern Nigeria and SE).	160,000
Experimental evaluation of gender dimensions of take-up of Sustainable Land Management (SLM) practices as a climate risk adaptation strategy in Ethiopia: Endline dataset	Experimental evaluation of gender dimensions of take-up of Sustainable Land Management (SLM) practices as a climate risk adaptation strategy in Ethiopia: Endline dataset	30,000
Gendered Labor Impacts of Herder-Related Violence in Nigeria	In partnership with colleagues at the World Bank, generate evidence on how agricultural households cope with exposure to herder-related violence in Nigeria. The results indicate unique intra-household inequalities in shifts in labor in response to herder-related violence.	13,100
Analyzing the Impact of Conflict on Community Health Worker Effectiveness and Household Outcomes in Rural Mali	Community Health Workers (CHWs) in Conflict Settings: I am partnering with Muso, a global health NGO started in Mali that aims to reduce child and maternal mortality through home-visiting community health workers (CHWs), to conduct additional analysis on already-existing and under-	34,332

	utilized data from a recently published RCT trial. The published study found that home visits versus fixed-site care by CHWs in rural Mali had similar effects on child survival; however, the trial was interrupted by several conflict events in the study region, which was not incorporated into their analysis. Thus, I plan to link their trial data with a conflict-event data to generate insights on how CHW productivity and household livelihoods are be affected by conflict in the Sahel.	
Evaluating Large-Scale Nutrition Programs in the Sahel Region	The Mormon Church is planning \$1B in investments in nutrition programming in fragile and conflict-affected areas over the next 5-10 years. To inform their programming, in 2025 they are planning a coordinated set of evaluations to study the impacts of a bundled nutrition intervention across 5 countries in the Sahel (Chad, Mali, Niger, Nigeria, and Burkina Faso). They are targeting conflict-affected regions within these countries and view this programming as part of a crisis response portfolio. A large component of the programming specifically targets women / mothers of young children. The surveys and intervention costs are fully funded by the Mormon Church. In Nigeria, the study will be randomized with Care as the implementing organization; in other countries, the learning questions and survey instruments will be coordinated, and the design will be quasi-experimental. With support, IFPRI could be involved in the RCT in Nigeria as well as in guiding the coordinated design across the other countries to amplify learning and impact. This project has significant potential to influence the aid portfolio of a new donor that is ramping up investment in the region, as well as to influence Care programming. This work would be getting started in mid-2025, with an endline coming in early 2026.	26,195
Impact Evaluation of Digital Cash Transfers in Conflict-Affected Sudan	This is an on-going impact evaluation of digital transfer in Sudan. It tests whether digital cash can serve those under active conflict. Baseline data have been collected and	54,999

	endline data are being collected through funding from FCM and the Sudan SSP.	
Evaluating Cash, In-Kind, and Digital Transfers in Conflict-Affected Settings in Partnership with WFP	This is an on-going impact evaluation of the relative effectiveness of different modalities of transfer (cash, in-kind and digital) in conflict-affected setting. This is being implemented with WFP. This was funded under WP2 of FCM	140,000
Rebuilding Trust in Local Governance Through Targeted Interventions in Conflict-Affected Ethiopia	This project builds on an RCT launched in 2023 to study how alternative targeting of cash transfers can help cushion the adverse impacts of conflict and rebuild trust in local governance in conflict affected setting in Ethiopia.	200,000
Evaluating Migration Prediction Tools Using Household Surveys in Honduras	Confirming the predictive capacity of the e-MPI and i-MPI for external and internal migration in Honduras and defining next steps for the tool: During May-June 2025, we will conduct the 2nd follow up survey to a panel sample of 1,200 households across 9 departments in Honduras. These data will allow us to assess how well the e-MPI and i-MPI (captured at baseline) predicted these migration instances, both standalone and against other potential measures. The results will be included in a paper and submitted to a journal for publication.	30,000
Assessing Long-Term Impacts of Cyclone Idai in Mozambique	Impact of Cyclone Idai on Mozambique: We study exposure to Cyclone Idai in Mozambique in 2019, the most destructive cyclone ever recorded in Africa, on households previously enrolled in an RCT using post-cyclone surveying of households in 2019 and four years later. We will generate evidence on whether temporary negative shocks can have persistent impacts on poverty if they cause households to fall into a poverty trap, due to (for example) loss of employment, livestock, or other productive assets; or through health channels, such as acquisition of persistent, incurable conditions such as HIV.	32,186
The Impact of Brick Kilns on Fragile Food Systems and Migrant Workers in Bangladesh	Food security in fragile settings like Bangladesh is threatened by environmental degradation, labor exploitation, and climate change. Agricultural productivity is vital, yet traditional brick kilns accelerate land degradation by emitting black carbon and extracting topsoil, reducing	37,618

	yields. With climate change shrinking arable land, sustaining food systems is critical to prevent increased displacement and migration. We propose a natural experiment using FAO and NASA satellite imagery to assess how brick kilns impact agricultural productivity. Machine learning techniques will compare crop yields near and far from kilns, informing policies to mitigate soil degradation. The Ministry of Agriculture has expressed interest in evidence-based solutions. Brick kilns rely on migrant labor, often under exploitative conditions. A recent study (Miller et al., 2024) found: 50% of workers were trafficked into bonded labor. 70% of kilns employed child labor. We propose a policy brief using newly collected data to inform the Ministry of Women and Children Affairs on addressing forced labor and migrant worker protections. This study will help policymakers and development agencies strengthen agricultural resilience and labor protections, addressing the interlinked crises of food security, land degradation, and migration.
