## Purpose of the PORB

As part of CGIAR's adaptive management approach, the 2025 planning process was conducted in two phases: i) Planning Phase – This included the development of the Preliminary Work Plans and Budget, through which Program and Accelerator teams defined how their projects would be managed, including objectives, timelines, responsibilities, and required resources. ii) Re-planning Phase – This allowed for updates to the initial plans, incorporating adjustments to reflect the updates made during the re-planning window from 24 March to 23rd June 2025, ensuring alignment with the approved 2025 budget envelopes, Centre allocations, and revised priorities.

This document presents the 2025 Plan of Results and Budget (PORB) for the Sustainable Animal and Aquatic Foods Program. It provides aggregated costing information for planned High-Level Outputs (HLOs) by Area of Work (AoW), along with Cross-Cutting and Management components. It also outlines the implementation timelines for both HLOs and Outcomes, as articulated in the updated Theory of Change (ToC). Additionally, the PORB highlights the intervention geographies, key partners, and mapped Centres W3/Bilateral projects.

| Sustainable<br>Animal and<br>Aquatic<br>Foods | Climate Action                         | Productivity+                       | Productivity +: HLO<br>OP 1.5 Inclusive<br>approaches, tools and<br>capacity sharing to<br>support animal and<br>aquatic food producers<br>to adopt combinations<br>of innovations for<br>improved productivity<br>and profitability,<br>emissions reduction and<br>nutrient dense foods | In CASP we will summarise learnings from experiences with producer-led knowledge networks and scaling activities which will inform our work in SAAF in pastoral areas in Ethiopia. We facilitate stakeholder engagement to validate models for scaling producer-led innovations based on pioneer positive deviance. For SAAF, we include new sites in pastoral areas of Ethiopia, that will enrich the debate on co-design of country specific methodologies for PPD for Ethiopia, which is also a focus on CASP, however there we emphasis locally-led climate action specifically, while in SAAF we take a more integrated approach working with One Health, Gender and Feed and Forage. In overlapping areas we work on manuscripts for implementation of methodologies of pioneer positive deviance for inclusive scaling with partners. |
| Sustainable<br>Animal and<br>Aquatic<br>Foods | Gender Equality<br>and Inclusion       | AoW5 GYSI                           | Tested interventions<br>for women & youth<br>empowerment and for<br>equitable norms and<br>policies                                                                                                                                                                                      | SAAF will produce evidence on norms research and interventions focused on AASs which will feed into the GENDER Accelerator AoW1.1. on norms at the FLWSs level. SAAF will learn from the Accelerator system-level research - and analysis across commodities and systems - to improve and amplify norms work in AASs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                                      |                                        |                                                 | High level output                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Sustainable Animal and Aquatic Foods | Digital Transformation                 | Data & Digital Solutions (AOW6)                 | HLO 6.2 Co-develop and test exploratory digital solutions, AI-based analytics, and decision-support systems that enable climate-smart, low-emission, and socially inclusive animal and aquatic food system decisions and/or policies at multiple scales | SAAF and DTA will collaborate on developing new AI-based tools or improve existing tools to integrate AI-based analytics to support decision makers evaluate trade offs and nudge them innovation packages that enhance productivity while minimizing emissions. Some joint outputs are enhancements to AADGG, OFA apps                                                                                                                                                                                                                                                                                                                                                                              |
| Sustainable Animal and Aquatic Foods | Climate Action                         | Data & Digital Solutions (AOW6)                 | HLO 6.2 Co-develop and test exploratory digital solutions, AI-based analytics, and decision-support systems that enable climate-smart, low-emission, and socially inclusive animal and aquatic food system decisions and/or policies at multiple scales | SAAF and Climate Action jointly scale KAZNET by aligning climate analytics with livestock advisory needs. Climate Action enhances climate-smart features; SAAF anchors use in productivity and market decision-making. The partnership ensures user-driven refinement, policy uptake, and integration into pastoral systems in the Horn of Africa, positioning KAZNET as a scalable tool for adaptive, inclusive, and data-informed animal food systems.                                                                                                                                                                                                                                             |
| Sustainable Animal and Aquatic Foods | Digital Transformation                 | Data & Digital Solutions (AOW6)                 | HLO 6.3 Co-design and deploy scalable digital platforms, including digital public infrastructure (DPI) and Digital Public Goods (DPGs), to facilitate knowledge exchange, data sharing, and innovation scaling in target geographies                    | SAAF and DTA will collaborate to develop knowledge products including digital public goods (DPGs) as well as digital platforms that are of the nature of DPIs. The overarching purpose of DPIs and DPGs is to cultivate an ecosystem of public and private sector actors who engage in delivery of demand driven digital innovations to farmers and livestock keepers. SAAF and DTA will work towards identifying critical building blocks in this ecosystem and work towards building some of these blocks or in some cases generate DPGs including knowledge products, policy briefs, thought pieces etc which can assist policy makers as well as mobilize investments into these building blocks |
| Sustainable Animal and Aquatic Foods | Better Diets and Nutrition             | Productivity + (AOW1) and Market Systems (AOW4) | HLO 4.3. Institutional and behavioral models for innovations uptake                                                                                                                                                                                     | SAAF will generate evidence on the bottlenecks in the livestock market systems and co-design interventions to address these. This will feed into the BDN AOW3 on end to end approaches. BDN AOW3 and SAAF AOW4 will work in the same sites to enable implementation of the end to end approach.                                                                                                                                                                                                                                                                                                                                                                                                      |

| Sustainable<br>Animal and<br>Aquatic<br>Foods | Climate Action                         | AoW2 Climate<br>& Environment       | HLO 2.1           | Climate Action brings together climate data and evidence across the different food system components; SAAF will generate system and site specific evidence, allowing for verification of climate impact data on the ground and feeding into the Climate Action-led harmonized data framework. Climate impacts and hotspots data will inform the development of improved breeds, climate-adaptive farming practices, and low-emission systems. SAAF outputs will be jointly delivered with Climate Action AoW 1.3.                                                         |
| Sustainable<br>Animal and<br>Aquatic<br>Foods | Climate Action                         | AoW2 Climate<br>& Environment       | HLO 2.2           | SAAF is developing context-specific climate adaptation and mitigation solutions, testing those at site level, and scaling them with animal and aquatic food value chain actors. This process will make use of evidence, solutions, and frameworks generated under the Climate Action Program, including on climate information services and early warning systems (AoW2.1 and 2.2), locally led adaptation approaches (AoW3.1-3.4), and low-emission solutions, especially for methane in AoW4.2, but also carbon in landscapes (AoW4.1) and along value chains (AoW4.3). |
| Sustainable<br>Animal and<br>Aquatic<br>Foods | Climate Action                         | AoW2 Climate<br>& Environment       | HLO 2.3           | SAAF is developing context-specific business models and financial mechanisms that can scale climate mitigation and adaptation solutions for animal and aquatic food producers and value chain actors. This process will make use of evidence, solutions, and frameworks generated under the Climate Action Program, in particular the work on equity and empowerment in mitigation action (AoW4.5) and the work streams on climate finance (AoW5.2-5).                                                                                                                    |
| Sustainable<br>Animal and<br>Aquatic<br>Foods | Climate Action                         | AoW2 Climate<br>& Environment       | HLO 2.4           | SAAF will work closely together with the climate mitigation work stream of the Climate Action Program, which includes the creation of a public good, big-data platform for the MRV of low-emissions farming (AoW4.4).                                                                                                                                                                                                                                                                                                                                                     |
