

CGIAR

SCALING FOR
IMPACT

Plan of results and budget 2025

CGIAR Science Program on Scaling for Impact

Women farmers weed a commercial vegetable field using mulch in Dang, Nepal. This technique helps conserve soil moisture, control weeds, and improve crop yields, especially important in areas with limited water. The Scaling for Impact program promotes the adoption of practical, proven methods like this to support climate-resilient farming, improve rural livelihoods, and scale sustainable agriculture solutions across South Asia.

Credit: Abdul Momin, CIMMYT

A woman farmer feeds young goats at her homestead in Surkhet, Nepal, as part of a local livelihood improvement initiative. Goat farming offers a valuable source of nutrition and income for rural households, particularly for women. Through the Scaling for Impact program, efforts are underway to expand access to small livestock farming, improve animal health, and support inclusive, sustainable food systems in mountainous and remote areas. Credit: Abdul Momin, CIMMYT

Purpose of the PORB

As part of CGIAR's adaptive management approach, the 2025 planning process was conducted in two phases: i) Planning Phase – This included the development of the Preliminary Work Plans and Budget, through which Program and Accelerator teams defined how their projects would be managed, including objectives, timelines, responsibilities, and required resources. ii) Re-planning Phase – This allowed for updates to the initial plans, incorporating adjustments to reflect the updates made during the re-planning window from 24 March to 23rd June 2025, ensuring alignment with the approved 2025 budget envelopes, Centre allocations, and revised priorities.

This document presents the 2025 Plan of Results and Budget (PORB) for the Scaling for Impact Program. It provides aggregated costing information for planned High-Level Outputs (HLOs) by Area of Work (AoW), along with Cross-Cutting and Management components. It also outlines the implementation timelines for both HLOs and Outcomes, as articulated in the updated Theory of Change (ToC). Additionally, the PORB highlights the intervention geographies, key partners, and mapped Centres W3/Bilateral projects.

Reporting						X	X	
Total Cross-cutting and Management budget								1,216,734

Area of Work 1: Engage and Empower				2025	
Outcome	Q1	Q2	Q3	Q4	2025 (Approved Budget)
I-OC 1.1: CGIAR's alignment with regional and national priorities is clarified and increased				X	
I-OC 1.2: CGIAR's Programs, Accelerators, and bilaterals engage with information supporting the adaptive management of Program, Accelerator, and bilateral research and scaling activities				X	
I-OC 1.3: CGIAR's Programs, Accelerators, and bilateral projects use evidence on stakeholders' demand to respond and iteratively adapt to new research and scaling opportunities				X	
I-OC 1.4: Scientists and scaling practitioners bridge gaps between global, regional, and country needs and research and scaling actions				X	
I-OC 1.5: CGIAR's Programs, Accelerators, and bilateral projects partner with new and effective research and scaling partners				X	
High-Level Outputs					
HLO 1.1.1: Demand signaling		X	X	X	2,976,197
HLO 1.1.2: Feedback and adaptive research and scaling prioritization		X	X	X	
HLO 1.1.3: Enhance strategies and coordination		X	X	X	
Total AoW 1 budget					2,976,197

Area of Work 2: Pathways to Scale in Agrifood Systems				2025	
Outcome	Q1	Q2	Q3	Q4	2025 (Approved Budget)
I-OC 2.1: CGIAR's external stakeholders exhibit improved capacity to diagnose, design, deploy, and refine impact pathways				X	
I-OC 2.2: Demand, innovation, and scaling partners collaborate to co-design impact pathways for innovation bundles and packages				X	
I-OC 2.3: Scaling partners deploy and iteratively evaluate scaling pathways providing evidence for stage-gating, adaptation, and amplification				X	
I-OC 2.4: CGIAR and its scaling partners proactively refine innovations and scaling pathways to enhance responsible scaling outcomes				X	
High-Level Outputs					
HLO 2.2.1: Innovation networks enhance agrifood system solution scaling		X	X	X	11,152,569
HLO 2.2.2: Methods evaluating agrifood system solutions for scale		X	X	X	
HLO 2.2.3: Scale-ready agrifood system solution bundles and packages		X	X	X	
HLO 2.2.4: Agrifood system solution scaling strategies		X	X	X	
Total AoW 2 budget					11,152,569

Area of Work 3: Enabling Environment Lab				2025	
Outcome	Q1	Q2	Q3	Q4	2025 (Approved Budget)
I-OC 3.1: Governments, market actors, and partners use evidence generated by AoW 3 to inform policies and institutional changes that address enabling environment barriers				X	
I-OC 3.2: Agricultural SMEs and cooperatives experience improved market systems with clearer regulations, economic incentives, and stronger public-private partnerships				X	
I-OC 3.3: Farmers, cooperatives, and agricultural SMEs actively adopt and promote inclusive innovations through strengthened support systems, targeted awareness campaigns, and improved extension services				X	
High-Level Outputs					
HLO 3.3.1: Enabling environment diagnostics		X	X	X	4,525,648
HLO 3.3.2: Scaling support services for enabling environments and institutions		X	X	X	
HLO 3.3.3: Science-policy partnership interfaces for responsible scaling		X	X	X	
Total AoW 3 budget					4,525,648

Area of Work 4: Achieving Impact by Unlocking Finance and Partnerships					2025
Outcome	Q1	Q2	Q3	Q4	2025 (Approved Budget)
I-OC 4.1: IFIs, governments, and the private sector widely integrate CGIAR-partner innovations into their investments, catalyzing and supporting the scaling of innovations.				X	
I-OC 4.2: CGIAR researchers access and use the scaling capacity toolbox and consult the Scaling Strategy Strike Force to embed elements into their ongoing or new projects				X	
High-Level Outputs					
HLO 4.4.1: CGIAR Expertise and Solutions Embedded in Development Investments and Partnerships		X	X	X	2,041,091
HLO 4.4.2: Innovation portfolio management and scaling strategy support teams		X	X	X	
Total AoW 4 budget					2,041,091

Area of Work 5: Learning for Impact				2025	
Outcome	Q1	Q2	Q3	Q4	2025 (Approved Budget)
I-OC 5.1: CGIAR, external partners, and donors integrate scaling science, principles, and frameworks into organizational practices				X	-
I-OC 5.2: Scaling actors are informed and use evidence-based recommendations for short, medium, and long-term optimal and responsible scaling processes and pathways				X	
High-Level Outputs					
HLO 5.5.1: Enhancing scaling science for societal impact		X	X	X	2,859,620
HLO 5.5.2: Insights for CGIAR scaling success through impact assessments		X	X	X	
HLO 5.5.3: Custom analytics for managing innovation portfolios and decision-making		X	X	X

CGIAR

SCALING FOR
IMPACT

W3 Mapping

A fish seller in Dinajpur, Bangladesh, offers a variety of small, nutrient-rich fish at a local market. These affordable aquatic foods are an important part of the local diet and livelihood. CGIAR's work through the Scaling for Impact program supports increased access to nutritious foods like these, while also improving income opportunities and reducing post-harvest losses.

Cross-Program collaboration

Program	Primary/ Secondary collaboration	Area of Work Title and Number	High level output	Brief description of how each Program contributes
Scaling for Impact	Sustainable Farming	AoW 2 - Pathways to Scale in Agrifood Systems	HLO 2.1 Multistakeholder networks and scaling hubs to enhance the capacity of partners for scaling pathway diagnosis, co-design, deployment, and assessment	The Sustainable Farming Program is collaborating with S4I across AoW-2, AoW-3, AoW-4, and AoW-5, with shared senior staff serving as a key mechanism for coordinated planning, delivery, and cross-program learning. This collaboration is contributing to HLOs 2.1–2.4 through co-design and testing of innovation bundles that respond to regional scaling opportunities in mixed farming systems, regenerative agriculture, and climate-smart agronomy. Flagship innovations such as direct-seeded rice, digital nutrient management tools, and precision water management are being aligned with S4I's preliminary Pathways to Scale in Agrifood Systems 2 (digital climate advisories) and 3 (mechanization and irrigation) to support bundling and scaling at country level. Under HLO 3.1, joint efforts are generating diagnostics on institutional, behavioral, and policy constraints to uptake—particularly through work on incentive frameworks for sustainability transitions. The program is also collaborating under HLO 4.1 to link proven innovations to IFI-financed public investment programs by identifying market entry points and sequencing public-private delivery strategies. Under AoW-5, Sustainable Farming is contributing to HLO 5.1 by strengthening adaptive research capacities and enabling cross-country knowledge sharing with NARES partners through structured learning platforms in Ethiopia, India, and Bangladesh.
		AoW 3 – Enabling Environment Lab	HLO 2.2: Co-designed scaling pathways for regional and national agrifood systems through improved stakeholder capacity	
		AoW 4 – Achieving Impact by Unlocking Finance and Partnerships	HLO 2.3: Impact pathways evaluated and ranked for their potential to advance innovation bundles and packages to scale in regional- and country-specific agrifood systems	
			HLO 2.4: Demand-driven and scale-ready agrifood system solution bundles and packages and strategies for scaling, with pathways and strategies identified for refinement, adaptation, and amplification	
			HLO 3.1 Co-created tools and analyses to assess opportunities and constraints in the enabling environment for innovation bundle scaling in targeted countries and regions and in the three primary pathways	
	AoW 5 – Learning for Impact	HLO 4.1 CGIAR engages with financing bodies—including IFIs and the private sector, including banks, impact investors, and CSR funds—through technical assistance and advisory support, to ensure innovations are positioned to support impact at scale		
			HLO 5.1 An applied scaling science and innovation systems research agenda strengthening South–South learning and capacities to implement more responsible and context-aware scaling strategies	

Program	Primary/ Secondary collaboration	Area of Work		Brief description of how each Program contributes
		Title and Number	High level output	
Scaling for Impact	Policy innovations	AoW 1 – Engage and Empower	HLO 1.1: A toolbox of methods, data, and dashboards to support the collection and sharing of multistakeholder demand data and to inform the adaptive management of CGIAR's 2030 Portfolio	The Policy Innovations Program is collaborating with S4I on 24 joint activities in 2025, with alignment across AoW-1, AoW-2, AoW-3, and AoW-5. It is contributing to HLOs 2.1–2.4 by co-designing regulatory frameworks, institutional models, and governance mechanisms that enable the scaling of CGIAR innovations. These contributions are being integrated into S4I's preliminary Pathways to Scale in Agrifood Systems—particularly those focused on digital climate advisories, mechanization and irrigation, and regenerative agriculture—through joint policy diagnostics and scenario-building activities in countries such as Bangladesh, Kenya, and Ethiopia. The program's policy design and foresight work supports the development, adaptation, and evaluation of scale-ready innovation bundles and adoption strategies under AoW-2.
		AoW 2 – Pathways to Scale in Agrifood Systems	HLO 1.2. Institutional innovations supporting prioritization, feedback, & adaptive management of research & scaling activities across CGIAR's portfolio	
			HLO 1.3: Comprehensive, forward-looking regional and country-level strategies, enhancing Portfolio-wide research prioritization, scaling coordination, & policy alignment	
		AoW 3 – Enabling Environment Lab	HLO 2.1 Multistakeholder networks and scaling hubs to enhance the capacity of partners for scaling pathway diagnosis, co-design, deployment, and assessment	
		AoW 5 – Learning for Impact	HLO 2.2: Co-designed scaling pathways for regional and national agrifood systems through improved stakeholder capacity	
			HLO 2.3: Impact pathways evaluated and ranked for their potential to advance innovation bundles and packages to scale in regional- and country-specific agrifood systems	
			HLO 2.4: Demand-driven and scale-ready agrifood system solution bundles and packages and strategies for scaling, with pathways and strategies identified for refinement, adaptation, and amplification	
			HLO 3.1 Co-created tools and analyses to assess opportunities and constraints in the enabling environment for innovation bundle scaling in targeted countries and regions and in the three primary pathways	
			HLO 3.2 Innovative institution building and capacity sharing activities; training materials and targeted deployment of demand-driven targeted EE technical assistance to enhance institutional and analytical as well as operational capacities to achieve scale	
			HLO 3.3 Innovative partnerships, policy hubs, economic and environment networks, community-building efforts, and NARES/farmer cooperatives supported to increase research-based public and private investments and policy improvements and address normative barriers	Under AoW-3, the Policy Program is central to delivering HLOs 3.1–3.3. It is contributing tools and co-created analyses to assess enabling environment constraints, delivering policy training materials, and supporting policy co-creation processes with government actors and regional platforms. This includes support for country-level scaling strategies that embed regulatory and institutional reforms, particularly in fragile or transitional contexts. Through its work on normative and procedural barriers, the program enhances operational capacities for policy-led scaling. The Policy Program also collaborates with S4I under AoW-4 to contribute to HLO 4.1, advising on how evidence-based policy innovations can be embedded in IFI-financed delivery programs. This includes aligning budgetary mechanisms and public investment pipelines with proven innovations. Under AoW-5, the program is supporting HLO 5.1 by contributing to adaptive policy learning systems and facilitating structured policy exchanges that enhance institutional learning across countries. This collaboration ensures that S4I's scaling pathways are informed by politically feasible, context-sensitive, and financially supported policy reforms that increase the likelihood of sustained innovation uptake.
			HLO 5.2 Evidence-based, context-specific recommendations on optimal scaling outcomes for selected CGIAR scaling efforts and solutions based on rigorous impact assessments, analysis of diverse scaling pathways, and supported by co-created scaling metrics, monitoring and evaluations.	

Program	Primary/ Secondary collaboration	Area of Work		Brief description of how each Program contributes
		Title and Number	High level output	
Scaling for Impact	Climate Action	AoW 1 – Engage and Empower	HLO 5.3 Curated analytics for innovation portfolio management and decision-making, including Scaling Readiness evaluations and customized assessment tools for target countries, both ongoing and as part of the annual adaptive management process, to ensure continuous learning and improvement	The Climate Action Program is collaborating with S4I on 38 joint activities in 2025, engaging across AoW-1 through AoW-5, with many senior staff playing leadership roles in both programs to ensure aligned planning and delivery. This collaboration is contributing to HLOs 2.1–2.4 by co-designing and testing scalable climate-smart innovation bundles—including digital climate advisories, low-emission agricultural practices, and early warning systems—targeted to vulnerable regions such as Bangladesh, Ethiopia, and Kenya. These innovations are being integrated into S4I's preliminary Pathways to Scale in Agrifood Systems, particularly Flagship 2 on digital advisories, with shared teams coordinating bundle design, demand targeting, and field-level validation. Under AoW-3, the program is supporting HLO 3.1 by generating enabling environment analyses that inform policy and institutional adjustments needed for climate innovation uptake. It is also contributing to HLO 4.1 under AoW-4 by identifying opportunities to embed climate-resilient practices into IFI-aligned investment plans, working with S4I to design technical support mechanisms for public sector delivery systems. Under AoW-5, the program is contributing to HLO 5.1 by embedding climate adaptation metrics and adaptive learning frameworks into country engagement platforms, enabling partners to scale with flexibility and evidence-based feedback.

Scaling for Impact	Breeding for Tomorrow	AoW 2 – Pathways to Scale in Agrifood Systems	HLO 2.1 Multistakeholder networks and scaling hubs to enhance the capacity of partners for scaling pathway diagnosis, co-design, deployment, and assessment	The Breeding for Tomorrow (B4T) Program is collaborating with S4I primarily through AoW-2 and AoW-3, contributing to the generation of HLOs 2.1 through 2.4 and HLO 3.3. Under AoW-2, B4T is engaging in joint activities to co-design and test regional and national scaling pathways for improved crop varieties (HLO 2.2), build multistakeholder networks that strengthen partner capacity for scaling (HLO 2.1), and generate evidence to evaluate and rank breeding-related innovation bundles for scale readiness (HLO 2.3). It is also contributing to demand-driven bundling of seed system innovations for scaling in target geographies (HLO 2.4), particularly through the alignment of CGIAR varietal pipelines with country-led delivery systems. Under AoW-3, B4T is supporting HLO 3.3 by participating in public-private policy and market partnerships aimed at improving the enabling environment for seed access, including regulatory alignment, investment coordination, and farmer-level adoption incentives.
		AoW 3 – Enabling Environment Lab	HLO 2.2: Co-designed scaling pathways for regional and national agrifood systems through improved stakeholder capacity	
			HLO 2.3: Impact pathways evaluated and ranked for their potential to advance innovation bundles and packages to scale in regional- and country-specific agrifood systems	
			HLO 2.4: Demand-driven and scale-ready agrifood system solution bundles and packages and strategies for scaling, with pathways and strategies identified for refinement, adaptation, and amplification	
			HLO 3.3 Innovative partnerships, policy hubs, economic and environment networks, community-building efforts, and NARES/farmer cooperatives supported to increase research-based public and private investments and policy improvements and address normative barriers

Scaling for Impact	Gender Equality and Inclusion	AoW 1 – Engage and Empower	HLO 1.1: A toolbox of methods, data, and dashboards to support the collection and sharing of multistakeholder demand data and to inform the adaptive management of CGIAR's 2030 Portfolio	The Gender Equality and Social Inclusion (GESI) Accelerator collaborates with S4I across AoW-2, AoW-3, and AoW-5 through coordinated work planning and complementary delivery, rather than shared staffing. It contributes to HLOs 2.1–2.4 by co-developing innovation bundles that integrate gender and inclusion considerations into scaling design, evaluation, and uptake strategies. These are being applied within S4I's preliminary Pathways to Scale in Agrifood Systems to ensure that scaling pathways respond to differentiated needs and structural barriers. Under AoW-3, GESI supports HLO 3.1 by generating evidence on normative constraints and policy levers for inclusive scaling, and contributes to HLO 3.3 through engagement in public-private partnerships that prioritize equity outcomes. While not directly engaged in AoW-4 delivery, GESI informs HLO 4.1 by advising on inclusion-sensitive investment strategies that align with public financing and CSR funding mechanisms. Through AoW-5, it contributes to HLO 5.1 by building evidence and tools for gender-responsive monitoring, and by feeding learning into national-level capacity strengthening efforts that help institutionalize inclusive scaling practices.
		AoW 2 – Pathways to Scale in Agrifood Systems	HLO 2.1 Multistakeholder networks and scaling hubs to enhance the capacity of partners for scaling pathway diagnosis, co-design, deployment, and assessment	
		AoW 3 – Enabling Environment Lab	HLO 2.3: Impact pathways evaluated and ranked for their potential to advance innovation bundles and packages to scale in regional- and country-specific agrifood systems	
		AoW 4 – Achieving Impact by Unlocking Finance and Partnerships	HLO 3.1 Co-created tools and analyses to assess opportunities and constraints in the enabling environment for innovation bundle scaling in targeted countries and regions and in the three primary pathways	
			HLO 3.2 Innovative institution building and capacity sharing activities; training materials and targeted deployment of demand-driven targeted EE technical assistance to enhance institutional and analytical as well as operational capacities to achieve scale	
			HLO 3.3 Innovative partnerships, policy hubs, economic and environment networks, community-building efforts, and NARES/farmer cooperatives supported to increase research-based public and private investments and policy improvements and address normative barriers	
			HLO 4.1 CGIAR engages with financing bodies—including IFIs and the private sector, including banks, impact investors, and CSR funds—through technical assistance and advisory support, to ensure innovations are positioned to support impact at scale	
			HLO 4.2 Scaling capacity toolbox in support of CGIAR Programs and bilateral projects strengthening the design, implementation, and monitoring of evidence-based and responsible scaling strategies

In the fertile fields of Surkhet, Nepal, a dedicated woman farmer carefully harvests ripe tomatoes from the vine. Her commitment and labor throughout the growing season have ensured a plentiful and high-quality crop. This bountiful harvest not only reflects her skill and perseverance but also represents a step toward improving her household's food security and income. Through such efforts, small-scale farmers like her contribute significantly to agricultural development and the scaling up of sustainable farming practices in the region.

CGIAR

SCALING FOR
IMPACT

System Organization and center allocations

Farmers in Rangpur, Bangladesh, prepare rice seedling beds using simple, smart farming methods. These practices help grow more food in a better way—using less water, protecting the environment, and supporting farmer incomes. CGIAR works through its Scaling for Impact program to take these good ideas to scale, reaching more people and places.

Farmers in Rangpur, Bangladesh, prepare rice seedling beds using simple, smart farming methods. These practices help grow more food in a better way—using less water, protecting the environment, and supporting farmer incomes. CGIAR works through its Scaling for Impact program to take these good ideas to scale, reaching more people and places.

A solar-powered irrigation pump in Karnal, India, helps farmers access water for their fields without relying on diesel or electricity. These clean energy solutions reduce costs, lower emissions, and support sustainable farming. The CGIAR promotes technologies like this through its Scaling for Impact program to enhance farm productivity and mitigate environmental pressure, making agriculture more efficient, affordable, and sustainable. In Karnal, India, farming families harvest potatoes side by side—transforming daily labor into food, income, and hope for the future. These community-driven practices reflect the strength and potential of smallholder agriculture. Advanced through CGIAR's Scaling for Impact program, practical solutions like these are reaching more farming communities, helping boost incomes, build resilient food systems, and create lasting benefits across rural landscapes.
